Superior performance and flexibility.

This precision-made replacement part offers superior strength and reliability, and adds several important measures of flexibility to the original design. We believe we have overcome all old weaknesses and design flaws.

Features

- Reinforced cam finger with no safety notch cut means no cracks or breaks!
- New cross pin allows universal fitting when used with SpeedLock™ firing pin.
- Threaded through to decrease weight. Durable black oxide finish.

With this new cocking piece design, all variations of Model 70™ [post-'64, pre-'64, Classic™] can now be fitted with a lightweight SpeedLock™ firing pin.

A SpeedLock™ firing pin and CS Spring will radically shorten lock-time.

[Requires minor firing pin modifications (easily done with hand tools) on pre-'64 and Classic™ models. Installation instructions available.]
